The term ‘natural beauty’ first gained currency in a legislative context in the 1907 Act which gave legal status to the National Trust (‘For Places of Historic Interest and Natural Beauty’). It has been the basis for the designation of both AONBs and National Parks since the 1949 National Parks and Access to the Countryside Act, but has never been exhaustively defined in legislation. Over the years, qualification and amendment to the legislation has made it clear that natural beauty includes considerations such as wildlife, geological features and cultural heritage but is not restricted by them. Government guidance relating to AONBs provides a useful non-technical definition: “Natural Beauty” is not just the look of the landscape, but includes landform and geology, plants and animals, landscape features and the rich history of human settlement over the centuries. The Natural Environment and Rural Communities Act 2006 clarified that land used for agriculture, woodlands, parkland or with physiological features partly the product of human intervention in the landscape, is not prevented from being treated as an area of ‘natural beauty’.

In the 1949 Act ‘natural beauty’ replaced other phrases such as ‘landscape beauty’ and ‘characteristic landscape beauty’. These provide a clue to the importance of landscape character and beauty as an aesthetic experience bringing people a sense of pleasure, wellbeing and connectedness with nature. Character is interpreted in different ways with the Landscape Institute focusing on the pattern of landscape elements, landscape archaeologists seeing the human process of a landscape ‘coming into being’ and ecologists also considering the quality of the natural processes and ecological systems which underpin patterns of vegetation. Natural beauty encompasses all of these views. Our perceptions of the landscape and the value we place on its qualities rely on our senses and emotions, and are shaped by many factors including taste, background, culture and understanding. These values may change over time even if the intrinsic character of the landscape does not.

For AONBs it is not enough just to possess natural beauty; their natural beauty should have the potential to be ‘outstanding’ both in terms of the quality of the components of character (including their biodiversity) and the human aesthetic experience of the landscape. For the purposes of this Plan, natural beauty is defined by the Statement of Significance.
